

North American Steel Alliance (NASA's) newest member/owner **Charter Steel Trading**, since its founding in 1976 has become an independent premier steel service center offering value add slitting, blanking and cut-to-length processing of cold-rolled, coated and hot-rolled products along with mechanical tubing.

Charter Steel entered the steel warehouse business by purchasing its first slitting line in 1978. Business grew and additional slitting lines were sequentially added. In 2011 Charter expanded and bought its 2nd facility in Chicago which houses 2 cut-to-length lines and 2 Shears. Charter Steel Trading currently has 250,000 square feet of in Chicago. Charter Steel Trading services customers across North America.

When asked what makes Charter Steel unique as well as contributing to the organization's overall success, Damon Wos, VP of Sales, said "There are a number of factors that set us apart, but at the top is our ability to be nimble and provide competitively priced products

and services that exceed our customer's expectations. We have worked hard to upgrade our talent and invest in our operations to ensure we can service our customers better than ever."

Wos also shared Charter's motivation for becoming a NASA member/owner, "Today's landscape is ever changing, and we view NASA as a group of our peers. From the networking, benchmarking and sharing of best practices we felt it was a good fit for our organization. We look forward to learning from and growing with the NASA community for many years to come."

Charter Steel takes pride in its team of experts to support customer needs in conjunction with aligning the supply chain to provide insight and solutions to lower customers' metal supply cost. Charter's core products include significant inventories of cold rolled, galvanized, galvanized, hot roll, hot roll pickled and aluminized coil and sheet products.
